

WEBRI-3.0

Webri is an integrated management system for Howell and Mitchell pair Bridge tournaments. The program resides on a server, is written in HTML/PHP and JS, and uses a MySQL database. Installation files and instructions are available on GitHub. The program can be used from any computer, tablet, or smartphone equipped with a browser and internet access.

Administration Module

By accessing the password-protected administrator module, you can:

- Open/modify tournaments by defining the type, number of rounds, number of boards per round, and start date.
- View the list of registered pairs and, if necessary, make changes.
- start the tournament generating the first round and print it.
- Monitor the entry of results and, if necessary, modify them or enter director-awarded scores.
- Generate and print the ranking, including partial ones.
- Check the details of the results (scores, percentages, contracts, leads) per board and per pair.
- Check the scores for each board.
- Check the time taken by players for each hand.
- View the images of the boards if the option to photograph the hands was chosen.
- View the hand diagrams with related Double-Dummy analysis, if the option for hand editing was chosen.
- Delete the last round.
- Delete a tournament.
- Close a tournament, freezing the results.

The auxiliary features: "**Force new round**" and "**Manual entry**" are designed to allow the use of this program even with data collected via paper scoresheets. Each closed tournament remains archived in the database and can always be consulted or even reopened.

The program makes use of advanced and proprietary Howell movement tables that take into account the orderly rotation of boards at the tables, minimal player movement, and optimal balancing of pairs for each hand. To leverage this last property, the "**Reorder Registrants**" feature has been included in the program. With this, registered pairs are reordered according to their rating, and consequently, the average strength of the players on the two lines is exactly balanced.

Registration Module

By accessing the registration module, you can:

- Select the tournament in which you want to participate.
- Check the list of registrants.
- Register a pair.
- Cancel a pair.

You can register individually by entering a "*" in place of the second name. Those who wish to pair up with the individually registered people can enter their own name in place of the asterisk.

Game Module

At the beginning of the tournament, a tablet/mobile phone, set up for the current tournament and the table number, must be available at each table. The game module allows the player using it, usually the one positioned in SOUTH, to perform the following operations:

- View information regarding the round number, table, opponents, boards to be played, and playing line.
- By clicking on the number of the board played, enter data regarding the contract (possibly doubled or redoubled), who is declaring it, the number of tricks made over or under, and the opening lead.
- Calculate the scores and accept them.
- Photograph or, better yet, edit the hand to perform checks and analyses.
- Check previous results at other tables.
- See the movement to be performed in the next round.

When the last score of the round is recorded, a written and vocal message notifies that the round is finished. Everyone must press the "Update/Check" button to refresh the page data. At the end of the tournament, buttons are made available that allow you to:

- View the ranking.
- View the scores for each board.
- Check all partial results for each pair and each board in a summary format.
- View any photos taken of the hands.
- View the schemes of the edited boards and related analyses.
- View the time taken to play the hands, round by round.

The game module, in addition to allowing access to the current tournament, also allows you to see the data of all archived tournaments.

Note on Scoring Type

When defining the tournament, the type of scoring adopted is specified:

- **MP:** percentage of Match Points relative to the theoretical maximum.
- **IMP:** International Match Points.
- **POM:** Points Of Merit.

<http://www.lamongolfiera.mb.it/wp-content/uploads/2019/05/Punteggio-di-merito1.pdf>)

- **DMP:** Distributional Match Points.

<http://www.lamongolfiera.mb.it/wp-content/uploads/2021/12/Il-punteggio-nel-bridgeR2.pdf>

In this release, players can view the ranking based on all four of these criteria, but in the next one, they will only be able to see the one defined by the Tournament Director.
